Serial No. 09/316,897

Amendments to the specification:

Please amend the Abstract on page 47 as follows:

A method and system for rendering dynamic web page images on a display is provided. Code may be ~~is~~ encapsulated in an external behavior component for affecting the behavior of elements inserted into an HTML document. A simple reference may be ~~is~~ attached to ~~the~~ an element in ~~the~~ a document to associate the element with the external behavior component. When the document is provided to a renderer and the renderer parses the element in the document, the renderer ~~accesses~~ may access the external component to modify a behavior of the page image. ~~For example, the properties or location of a displayed element associated with the external behavior component may be changed on an event, the external behavior component can control user data input, or the external behavior component can draw on the image.~~ Multiple documents can reuse external behavior components, and an element can be associated with multiple external behavior components. The associations between elements and external behavior components may be maintained in cascading style sheets, inline with the elements, and in various formats.
